| 7 | Task 5 – Cybercrime Awareness | 12 |
| 8 | Conclusion | 14 |
| 9 | References | 15 |

# Introduction

This project focuses on building digital literacy skills that are essential for students in today's world. As a Student Digital Ambassador, the goal of this project was to understand and apply different aspects of digital literacy such as online safety, professional communication, and use of digital tools.

Through this project, I worked on creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, learning email etiquette, and understanding cybercrime awareness.

This project helped me improve my understanding of how to use digital platforms effectively and responsibly in both academic and professional environments.

# Task 1 – Digital Literacy Infographic

For this task, I created a digital literacy infographic using Canva. The main idea behind this task was to explain digital literacy in a simple and visual way so that students can easily understand it.

In my infographic, I covered three main areas: what digital literacy means, useful digital tools for students, and safe internet practices. I explained digital literacy as the ability to use digital tools effectively, communicate responsibly, and stay safe online. I also included some commonly used tools like Google Docs for assignments, Canva for presentations, and GitHub for managing projects.

Another important part of my infographic was internet safety. I added points like using strong passwords, not sharing personal information, and avoiding unknown links. These are basic but very important practices that every student should follow.

I chose Canva for this task because it is very easy to use and provides many ready-made templates. It helped me design the infographic quickly without needing any advanced design skills.

One difficulty I faced was managing all the content within limited space. At first, it felt a bit crowded, but after adjusting the layout and removing extra text, it became more clear and readable.

Overall, this task was interesting and helped me understand how to present information in a visual format. The infographic design was quite the exploration of the ideas and the most fun part . It also made me realize that digital literacy is not just about using technology, but also about using it safely and responsibly.

# Task 2 – Digital Portfolio

In this task, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and HackerRank. The purpose of this task was to build a basic professional presence online, which is important for students from the beginning of their college journey.

On GitHub, I created my profile and also added a profile README. This helps in showcasing my projects and learning progress. I understood that GitHub is not just for storing code, but also for presenting my work to others.

On LinkedIn, I completed my profile by adding my education details, including my course, college, and expected graduation year. I learned that LinkedIn is useful for building a professional network and connecting with seniors and professionals.

I also created an account on HackerRank and solved a basic problem. This platform helps in improving coding skills and practicing different types of problems.

Through this task, I understood the importance of having a digital presence. In the future, I plan to regularly update my GitHub with projects, use LinkedIn to build connections, and practice coding consistently on HackerRank.

Overall, this task helped me take my first step towards building a professional identity online, which will be useful for internships and career opportunities.

# Task 3 – Platforms

In this task, I explored both coding and collaboration platforms. I used HackerRank for coding practice and Google Forms for creating a quiz. This task helped me understand how different online tools can be used for learning and collaboration.

On HackerRank, I solved a beginner-level problem. It was a simple problem, but it gave me a basic idea of how coding platforms work. I learned how to read a problem, write code, and submit it for evaluation. It also helped me feel more confident about starting coding practice.

For the collaboration part, I created a Digital Literacy Awareness Quiz using Google Forms. The quiz included five questions related to digital literacy, online safety, and useful tools for students. I included both multiple choice and short answer questions.

I also checked the responses section and linked it to a Google Sheet. This helped me understand how data can be collected and analyzed easily using online tools.

This task was interesting because it showed how digital platforms can be used not only for learning but also for interacting with others. I believe these tools will be very useful in my academic work and future projects.

Creating the Google Form was easy and fun for me ®

# Task 4 – Email Etiquette

In this task, I learned about professional email writing and social media etiquette. I wrote two formal emails and created a checklist of do's and don'ts for responsible online behavior.

The first email was about requesting an extension for an assignment. The second email was about applying for a summer internship. While writing these emails, I focused on keeping the tone polite, clear, and professional. I also made sure to include proper subject lines, greetings, and sign-offs.

In addition to this, I created a social media checklist that included important points such as using respectful language, avoiding sharing personal information, and thinking before posting anything online.

One important thing I understood from this task is that poor digital communication can create misunderstandings. For example, sending an email without a proper subject or using informal language can

make a bad impression. This can be avoided by following basic email etiquette rules.

Overall, this task helped me understand how to communicate effectively and professionally in digital platforms, which is very important for both academic and professional life. I realized I was making small mistakes earlier like being rude that too unconsciously.

# Task 5 – Cybercrime Awareness

In this task, I learned about cybercrime, specifically UPI fraud, which is very common in India. I created a case study explaining how such frauds happen and also prepared a checklist to help people stay safe online.

In the case study, I explained that fraudsters usually trick people by pretending to be from banks or trusted services. They ask users to click on links or approve payment requests. Many people think they are receiving money, but actually they are sending it by entering their UPI PIN. This leads to financial loss.

I also created a prevention checklist which included tips like not sharing UPI PIN, avoiding unknown links, using strong passwords, and enabling two-factor authentication. I also included important reporting options like the National Cyber Crime Portal and helpline number 1930.

While working on this task, I was surprised to see how easily people can be fooled by such scams. It made me realize that even small mistakes can lead to serious consequences.

After learning about this, I will be more careful while making online transactions and will always verify before taking any action. I have seen such messages myself, they look tempting and but really are dangerous.

# Conclusion

This project helped me understand the importance of digital literacy in today's world. Through different tasks, I learned how to use digital tools, communicate professionally, and stay safe online.

Each task gave me practical knowledge, from creating an infographic to building my digital profile and understanding cybercrime. It also helped me improve my confidence in using platforms like GitHub, LinkedIn, and Google Forms.

Overall, this project was a useful learning experience, and I believe these skills will help me in my academic journey and future career.
